Double Patenting

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claims 1-19 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-19 of prior U.S. Patent No. 6,720,551. This is a double patenting rejection.

3. Claims 23-29 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-18 of prior U.S. Patent No. 6,410,907. This is a double patenting rejection.

Drawings

4. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "power supply" of claims 21 and 22 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure

Art Unit: 2878

must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

6. Claim 23 is objected to because of the following informalities:

In claim 23, line 5, "teh" should be changed to -the--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claims 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakano et al (5,656,769).

Regarding claim 20, Nakono et al shows in Fig. 1B the following elements of applicant's claim: a) a frame (6) having first (the surface portion of the frame 6 to where the hinge 7b is connected) and second mounting surfaces (the surface portion of the frame 6 to where the hinge 7a is connected); b) at least two actuators (1 and 2) having first and second ends (the actuators 1 and 2 have first and second ends), wherein each of the actuators is extendable and retractable, and the first and second ends of each actuator is attached to the corresponding first and second mounting surfaces of the frame respectively (the first end of the actuator 1 is attached to the surface portion of the frame 6 via the hinge 7a, and the second end of the actuator 2 is attached to the surface portion of the frame 6 via the hinge 7b); c) a center translation platform (8) attached between the first and second ends of the actuators (the center translation platform 8 is attached between the first end of the actuator 2 and the second end of the actuator 1); and d) a plurality of flexures (7a-7c) arranged to allow transnational movement of the center translation platform (the flexures 7a-7c allow the platform 8 to move X-Y plane) when the actuators extend and retract during scanning operation.

Regarding claims 21 and 22, the limitations therein are disclosed in co.4, lines 46-49.

Art Unit: 2878

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ando et al (6,617,762) is cited for disclosing a scanning unit for moving an object.
